Cat5 Wide Band Extender

FE-2000CW series - NC14004-B717/U R

The SERVIS™ family Cat5 Wide Band Extender enables the user to operate a control console with a high-resolution monitor via Cat5E UTP cable, up to a distance of 300 meters.

In addition, FE-2000CW series supports the extension for Audio function & Touch Panel control (RS-232C), as well as USB console operation.

■ FEATURES

Achieves problem-free image quality at remote distance of 300 meters

XGA (1,024 x 768 dots) and SXGA (1,280x1,024 dots) are supported to 300 meters, UXGA (1,600x1,200 dots) to 200 meters.

Equipped with compensating adjustments to provide optimum image quality

Brightness and Contrast can be adjusted independently via controls on the receiver unit.

Superior RGB color-shift correction circuit (patent pending)

Any color shift (skew) due to differences in signal line length inside the Cat5E UTP cable are eliminated, resulting in clear and crisp reproduction of video signal.

Superior Stereo Sound Control:

Stereo audio is digitized to achieve clear sound transmission; Audio bandwidth up to 20KHz; 16-bit digital audio converter provides CD quality sound remotely using 44.1KHz sampling rate

Supports RS-232C extension (Rx/D / Tx/D only) for Touch Panel control, etc.

Simultaneous operation for audio and touch panel can be supported:

FE-2000CW allows the extension of RS-232C signals for both audio and touch panel with Cat5E UTP cables, as well as the keyboard, mouse, and video signals. This has applications in a variety of fields, including broadcasting systems and various types of monitoring equipment.

Multiple platforms supported

Our long experience as a leading keyboard design company enables these new products to support a variety of keyboard and mouse interfaces. This series provides a multi-interface platform that can be connected to any system equipped with PS/2, PC USB, SUN 8P I/O, or SUN USB simply by selecting the suitable cable. The video interface supports the D-sub15-pin as standard; 13W3 Sun video interface supported with optional conversion adaptor; Separate and Composite sync supported.

Additional local console connection provided

A local console can be supported by local unit in the computer room.

Easy to configure remote system access using Cat5E UTP cables

Installation is simple and easy using industry-standard Cat5E UTP cables, same as used in LAN applications (installation of separate remote console cable is required in addition to existing LAN cables).

Available options for installation in equipment

Bracket for installation into a 19-inch rack is optionally available.

Combine with KVM switch for system-wide access

The SERVIS Cat5 Extender can be combined with KVM switches (SERVIS series) and console drawers (SERVIS Drawer), enabling the remote operation of multiple servers from a distant location.

Note:

Cat5 cables:

1. Cat5E cables are required for connection between the local and remote units, whose transmission performance shall be higher than 350 MHz UTP. Otherwise, the the transmission performace cannot be controlled by skew adjustment.
2. The connection type shall be straight connection. In addition, it shall be decided T568A or T568B inside the system.
3. STP cable cannot be used.

Serial cable:

1. The serial connection cable between the system and the local for FE-2000 series shall be used with standard RS232C cross cable.
