Trouble Shooting:
How to resolve no Display issue with KSP1500-i3 Case 6-106659

QUESTION:

I am wondering how i can enable the display i did a resets in bios to default and now the lcd has stopped coming on the stainless fanless industrial pc but i connect with hdmi to the external screen it is working is the a way in bios to enable the embedded lcd?

Please confirm the BIOS settings as follows:

LVDS resolution adjustment method: as shown in the attached figure
1. Menu Chipset→System Agent (SA)→Graphics Configuration→LCD Control.
2. Primary IGFX Boot Display selects VBIOS Default.
3. LCD Control → LCD Panel Type Select the corresponding resolution.
